

Test Suite: Private Safe Feature

Test Suite: Initial Setup and Authentication

Test Case ID	Description	Pre-conditions	Test Steps	Expected Result	Status
TC_PS_001	Verify first-time setup of Private Safe.	No prior privacy password is set on the device.	1. Go to Settings → Privacy → Privacy tab → Private Safe. 2. Attempt to toggle or open it. 3. Follow prompts to set up a 6-digit Privacy Password and a security question.	1. The system must prompt for a dedicated Privacy Password. 2. It must successfully register the password and recovery questions.	Pass
TC_PS_002	Verify authentication via Biometrics (Fingerprint/Face Unlock).	Private Safe is configured. Biometrics are registered on the device.	1. Navigate to Private Safe settings. 2. Enable “Fingerprint” or “Face Unlock” for Private Safe. 3. Close settings, reopen Private Safe, and authenticate using your fingerprint.	1. The toggle for biometric link should save properly. 2. Private Safe should unlock immediately upon successful biometric read.	Pass

Test Suite: File Operations (Moving In and Out)

Test Case ID	Description	Pre-conditions	Test Steps	Expected Result	Status
TC_PS_003	Verify moving a photo from the Photos/Gallery app into Private Safe.	A media file exists in the native Photos app. Private Safe is active.	1. Open the native Photos app. 2. Long-press an image. 3. Tap the Set as private icon on the bottom action bar.	1. The image should instantly disappear from the public gallery view. 2. A confirmation toast message (“Setting as Private...”) should appear briefly.	Pass

TC_PS_004	Verify accessing and viewing hidden files inside Private Safe.	Files have been successfully moved into Private Safe.	1. Access Private Safe via Settings or by long-pressing the Photos app top tab. 2. Authenticate. 3. Tap on the Images and videos directory.	The previously hidden photo must render correctly and securely within the Private Safe interface.	Pass
TC_PS_005	Verify restoring (moving out) a file from Private Safe back to public storage.	Files exist inside Private Safe.	1. Open Private Safe → Images and videos. 2. Select the file and tap Set as public. 3. Choose a target directory folder (e.g., Camera or Pictures).	1. The file must disappear from Private Safe. 2. The file must reappear intact in the chosen public folder.	Pass

Test Suite: Security & Negative Scenarios (Edge Cases)

Test Case ID	Description	Pre-conditions	Test Steps	Expected Result	Status
TC_PS_006	Verify system behavior when attempting to take a screenshot inside Private Safe.	User is inside an active, unlocked Private Safe directory.	1. Trigger a screenshot using the 3-finger swipe gesture or Power + Volume Down keys.	ColorOS must block the action. A system toast notification should display: “Can’t take screenshots due to security policy” or generate a completely black screenshot file.	Pass
TC_PS_007	Verify screen recording behavior inside Private Safe.	Screen recording is turned on from the Quick Settings toggle.	1. Start a screen recording session. 2. Navigate into Private Safe and authenticate.	The recorded video file must capture a completely black screen for the entire duration the user stays inside Private Safe.	Pass
TC_PS_008	Verify auto-lock behavior when the app is minimized or backgrounded.	Private Safe is currently unlocked and open.	1. Press the Home button or use gestures to go to the Home screen. 2. Immediately tap the Recents key to bring Private Safe back to focus.	Private Safe must auto-lock instantly upon being backgrounded. It must demand re-authentication before displaying any files.	Pass

TC_PS_009	Verify data integrity during an OTA (Over-The-Air) ColorOS update.	Files are present inside Private Safe.	1. Perform a system software update via Settings → About Device → Software Update. 2. Wait for the phone to reboot. 3. Open Private Safe.	All encrypted files must remain intact, undamaged, and accessible with the original privacy password.	Pass
